*Poverty is measured by using 48 thresholds that vary by family size and number of children within the family and age of householder. To determine whether a person is in poverty, one compares the total income of that person's family with the threshold appropriate for that family. If the total income is less than the threshold, then the person is considered in poverty, together with every member of his or her family. Institutionalized people, people in military quarters, people living in college dormitories, and unrelated individuals less than 15 years old are excluded from the calculation of poverty rates.

¹Substance Abuse is defined as the excessive use of a potentially addictive substance, especially one that may modify body functions.

²Persons are only counted once each year regardless of how many times they receive treatment (unduplicated count). Persons must be admitted to a DMHSAS-funded agency and have received a service during the year.

³Due to reporting errors, total cases by race may be slightly different from total cases.
